

# Outpatient Neurorehabilitation Program

The Johns Hopkins Outpatient Neurorehabilitation Program involves a team of specialists dedicated to providing the highest quality of care and service to patients through rehabilitation medicine (physiatry), rehabilitation neuropsychology, speech language pathology, occupational therapy, physical therapy and social work. This program addresses the needs of adult outpatients with neurological illness or injury. Together, the patient and the team develop a comprehensive rehabilitation plan that will help to achieve established goals, including enhancing functional daily skills and quality of life, as well as returning to a full lifestyle.

Examining coordination function of the hand as part of the comprehensive neurorehabilitation evaluation.
