

THE JOHNS HOPKINS HOSPITAL

FOR MORE THAN 125 YEARS, the mission of The Johns Hopkins Hospital has been to lead the world in the diagnosis and treatment of disease and to train tomorrow's great physicians, nurses and scientists. Above all, we aim to provide the highest-quality health care and service to all of our patients.

The teaching hospital affiliated with the Johns Hopkins University School of Medicine, we are located in the heart of East Baltimore, at 1800 Orleans St. In 2012, we opened the The Charlotte R. Bloomberg Children's Center and the Sheikh Zayed Tower, adding approximately 1.6 million square feet of state-of-the-art medical facilities.

Nationally and Internationally Recognized Specialty Care

The Johns Hopkins Hospital is the only hospital in history to have been [ranked first](#) in the nation for 22 years by *U.S. News & World Report*.

Patient- and Family-Centered Care

The Johns Hopkins Hospital promotes a culture that embraces, expects and rewards the delivery of [patient- and family-centered care](#). We partner with patients, families and others to create a treatment plan that works for each patient and family.

Part of a Premier, Integrated System

The Johns Hopkins Hospital, founded in 1889, and the Johns Hopkins University School of Medicine, created in 1893, form the nucleus of [Johns Hopkins Medicine](#), one of the world's premier, integrated health systems. It includes six hospitals, four community-based health care and surgery centers, more than 40 primary and specialty care practices throughout the region, and managed care and home care services.

BY THE NUMBERS

Licensed Acute Care Beds	1,154

INNOVATIONS

World-renowned for medical discovery, Johns Hopkins:

- Devised landmark surgery for breast cancer (1889)
- Created radical perineal prostatectomy to treat prostate cancer (1904)
- Developed renal dialysis (1912)
- Pioneered the first direct heart surgery (blue baby operation), 1944
- Developed CPR (1958)
- Invented the first implantable, rechargeable pacemaker for cardiac disorders (1972)
- Performed the first defibrillator implantation in a human being (1982)
- Devised an operation to remove a prostate without injuring nearby nerves (1982)
- Refined paclitaxel, hailed as the most promising anticancer drug in decades (1984)
- Pioneered complex surgeries for separating twins joined at the head (1987)
- Developed a safer way to perform the Whipple operation for pancreatic cancer (1993)
- Developed the Partin Tables, enabling prostate cancer patients to get an accurate estimate of the extent of their cancer before surgery (1993)
- Discovered the first effective treatment for severe forms of sickle cell disease (1995)
- Developed and performed the world's first minimally invasive live-donor kidney removal (1995)
- Developed a way to deliver chemotherapy drugs directly to a brain tumor (1996)
- Was among the first to isolate and cultivate human embryonic stem cells (1998)
- Showed that HPV is associated with the development of certain head and neck cancers (2000)
- Launched paired kidney exchange, in which a living donor who is incompatible with an intended recipient exchanges kidneys with another donor/recipient pair (2001)
- Developed the first biologic pacemaker for the heart, paving the way for an alternative to implanted pacemakers (2002)
- Pioneered kidney transplants among incompatible donors and recipients (2002)
- Found the genes for and described Loeys-Dietz syndrome, a previously unrecognized disorder characterized by severe aneurysms (2006)
- Developed a "safety checklist" that has saved thousands of lives by reducing bloodstream infections (2006)
- Pioneered a new way to reach skull-base tumors by making an entry incision in the eyelid (2010)
- Created a treatment that may cure some patients with sickle cell disease (2011)
- Planned and performed the most challenging double-arm transplant to date (2012)
- Launched the Bloomberg-Kimmel Institute for Cancer Immunotherapy to develop promising therapies to eradicate cancer (2016)
