Genome-Wide Association Studies of Asthma in Populations of African Descent

The goal of this proposal is to simultaneously perform a genome-wide association (GWA) study for asthma and associated quantitative traits in a family-based, African Caribbean population and an independent population of African American asthmatics and non-asthmatics, validate findings in large panels of English families selected for asthma, and subsequently evaluate the generalizability of these findings in the larger U.S. white population. Gene-gene and gene-environmental interactions will also be tested.

This project is focused on understanding the complex interplay between mechanical ventilation & increased morbidity & mortality associated with acute lung injury. The program will examine the genetic basis of the development of ventilator-associated lung injury, evaluate new therapies & identify new molecular targets for ventilator-associated lung injury.

NIH Atopic Dermatitis and Vaccinia Network-Clinical Studies Consortium

The overall objective is to develop & implement a research plan to reduce the risk of eczema vaccinatum, a potentially life-threatening complication of smallpox (vaccinia virus) vaccine immunization that occurs almost exclusively in patients with atopic dermatitis (AD).
