

Postdoctoral Position in the department of Gastroenterology

NIH funded project (five years beginning Sept 2009). The role of chloride channels in renal disease and renal failure.

Looking for a motivated individual to study 1) translocation of transporters using biotinylation, transfection, western blot and 2) binding partners of Clc-5, a protein in the class of voltage gated chloride channels that is expressed in the kidney cortex using IP and mass spec.

Experience in biochemistry, cell biology is necessary.

Please, e-mail your CV to:
