

**Johns Hopkins Hospital  
FALL-WINTER  
2006-2007  
RSV Information for Parents**

Dear Parent,

Your child is being tested and treated for Respiratory Syncytial Virus (RSV) infection. RSV is a virus that children catch easily from other children and visitors. It is spread by contact with respiratory secretions such as saliva from coughing or sneezing. RSV usually causes a child to cough, wheeze, have a fever and, sometimes, have trouble breathing.

While your child is in the hospital, he or she will be on “**Pediatric Droplet Precautions**” to keep this illness from spreading to others. Any staff member entering your child’s room should wear gloves. When a staff member touches your child or is within 3 feet of the bedside, they should also wear a gown and mask. If someone forgets, please remind him or her that your child is on “Pediatric Droplet Precautions”. We know that good hand washing can help stop the spread of RSV. **IT IS VERY IMPORTANT THAT YOU WASH YOUR HANDS CAREFULLY BEFORE YOU ENTER AND AFTER YOU LEAVE YOUR CHILD’S ROOM.** You may also use the Purell alcohol based hand cleaner located outside your child’s room instead of soap and water for hand washing.

While your child is on “Pediatric Droplet Precautions,” please help us by following these rules:

1. Visitors (including brothers and sisters) less than 16 years old may not visit.
2. Parents and visitors must wear a mask during the entire visit (inside and outside of the patient room).
3. Masks should be changed when damp and before leaving the patient’s room.
4. To protect your child and others, if you do not feel well, have a fever over 101° F, cough, runny nose or sore throat, please do not visit until you are feeling better.
5. Do not touch other children, their toys or clothing.
6. Do not share your child’s toys, clothes or belongings with other children
7. Your child will not be able to go to the playroom or the Family Resource Library. Child Life staff will bring your child toys and games to use at the bedside.
8. If your child is tired of playing with toys and games from Child Life, please place them in the dirty toy box.

Thank you for helping us prevent the spread of RSV and other viruses. If you have any questions, please feel free to ask your child’s doctor or nurse.

Sincerely,  
Children’s Center Staff and  
Hospital Epidemiology/Infection Control Staff
