

## Johns Hopkins Medicine Fellowship in Health Systems Management

*The primary goal of the **Johns Hopkins Medicine (JHM) Health Systems Management Fellowship** is to foster the growth and development of early-career physicians interested in health systems management. The longitudinal rotations and project-based curriculum are designed to create a path for future physician leaders by training them in skills relevant to integrated health systems. Through direct involvement in various JHM initiatives and interactions with system leaders, fellows will gain an understanding of health management and policy.*

*The fellowship is one year in duration with one new fellow selected each academic year.*
