Mammograms: AI Software

As part of our commitment to provide equitable patient access to the latest in technology and software, Johns Hopkins Medical Imaging sites will be utilizing AI software for mammography exams. Patients will not be charged additional fees for this secondary level of review.

Screening & diagnostic mammograms will be reviewed by AI software as a secondary tool to help increase accuracy, provide quicker results, and lower recall rates.

Board-certified breast imaging specialized radiologists will continue to read and report on all mammography exams.

No additional fees will be charged to the patient for this software. The report and images will continue to be available on MyChart.

This AI software is designed to work concurrently with our breast imaging radiologists and not as a standalone option. Patients will not receive a secondary report from the software findings as our breast imaging radiologists will review and integrate any software findings into their final report.

Clear Results, Compassionate Care
