

JOHNS HOPKINS MEDICAL IMAGING

New Ultrasound at Columbia Medical Center

A new addition to our Johns Hopkins Medical Imaging at Columbia Medical Center is cutting-edge ultrasound equipment.

This ultrasound equipment will increase our patient capacity while also enabling high-resolution imaging with breast, MSK, vascular, and limited pediatric applications. At Johns Hopkins, we have dedicated ultrasound technologists who exclusively work in this modality and our board-certified radiologists are sub-specialized.

Features:

- State-of-the-art technology.
- Expediates scanning time.
- Enhances image contrast and sharpness.
- Applications for breast, MSK, vascular & limited pediatric exams
- Increased sensitivity and resolution for detailed tissue and vascular imaging.
- New technology to define vascular structure with 3D-like appearance through doppler signaling.

Clear Results, Compassionate Care
