

Center for CDH

The Center for Congenital Diaphragmatic Hernia is the only unit in the country dedicated solely to 24/7 CDH care. While national survival rates for challenging CDH cases are 40% to 60%, our survival rate is greater than 90% including the most severe cases.

Patient families relocate from around the country and other parts of the world for our care, and we support them with family-centered care. Our specially-trained multidisciplinary team cares for critically ill patients ranging in age from newborn to pediatric across the continuum of care, from admission to discharge.

Unit Overview

- 15-bed unit serving patients of all acuity levels and ages
- Respiratory ECMO center for the hospital
- Typical nurse-patient ratio is 1:1 or 1:2
- Opportunities for clinical advancement and advanced therapy training

Meet Our Team

- 91% of our nurses have BSN or higher
- 15% of our nurses have a certification
- Nurses in our unit come from diverse backgrounds: new graduates, PICU, NICU, CVICU, pediatric acute care and adult care
