

DIABETES PREVENTION PROGRAM (DPP)

HOW TO SUBMIT A REFERRAL

Ambulatory Referral to Diabetic Prevention Program - REF49

Patients must have an elevated BMI with prediabetes or history of gestational diabetes.

Search REF49 or DPP

The DPP now has its own referral (REF 49). Search **DPP** to bring up referral.

Auto Filled Form

The DPP referral saves a TON of time by bringing in patient qualifying information, such as **reason for referral, most recent BMI readings and most recent HGBA1c**. The answers to the qualifying questions are selected automatically based on this information.

Optional Specific Comments

The DPP coordinator will call the patient to assess eligibility. PCPs will receive a notification in EPIC about patients' enrollment, attendance and progress.
