JOHNS HOPKINS MEDICINE

Approved March 21, 2022

Healthy Volunteers Needed for Research on Nicotine Pouches

Healthy adults at least 21 years old are needed to take part in a Johns Hopkins research study. We are seeking people who currently smoke cigarettes and are not seeking treatment to quit smoking. The study will require 8 total visits to the lab (located at the Bayview Medical Center). Participants will first complete an in-person screening session (lasting about 2 hours) to determine study eligibility. Participants who are eligible and agree to be in the study will use nicotine pouches of different nicotine strengths and flavors as well as cigarettes in 7 different lab sessions that will each last about 5 hours. Scan the QR code below to see if you qualify.
