ANAPHYLAXIS
- Bilateral facial swelling
- Wheezing and/or severe difficulty breathing
- Occurs within 6 hours of antibiotic administration

URTICARIA (HIVES)
- Itchy, red bumps with white centers
- Occurs within 6 hours of antibiotic administration
- Bumps disappear after a few hours and new ones may appear

EXFOLIATIVE DERMATITIS
- Skin peeling or blistering
- Mucosal (eyes, mouth, genital) involvement
- Develops after several days of antibiotics
- Eg.: Stevens-Johnson syndrome

NON-URTICARIAL RASH
- Tiny red dots covering a large area of the body
- May feel rough to the touch
- Appears after 2—3 days of antibiotic administration
- Can be treated through and does not contraindicate future antibiotic use
