Money-Saving Shopping Tips

1. Shop only with a list.
2. Shop only once or twice a week. You'll spend more if you go more often.
3. Buy only items you really need, unless something you use often is on sale. If something you use often is on sale and can be stored, consider buying enough for a few weeks.
4. Check grocery ads for sale items and the Sunday newspaper inserts for coupons.
5. Compare discounted items with similar products at the regular price to see if you really are saving.
6. To avoid temptation, don't go shopping hungry.
7. Check unit pricing (the price per ounce or pound, usually listed on the shelf below the item). This helps you compare sizes and brands, to decide which is the least expensive.
8. Look for store brands or generic brands—they are often cheaper than national brands.
9. Prepared foods cost more than the plain ingredients from which they are made.
10. Plain cereal costs less per ounce than sugar-coated cereal.
11. Fat-free (skim) milk is less expensive than reduced-fat (2%) or whole milk.
12. Buy only the amount you will use. An item that costs less per serving will not save money if it spoils.
13. Whole, unwashed produce usually costs less than washed and cut up items.
14. Buying salad makings at a salad bar might be less expensive than buying all of the items separately (e.g., a one packet of lite-dressing instead of a whole bottle) – Especially for one or two people.
15. Consider that soups, stews, and casseroles can stretch a little meat to serve more people.
16. Limit use of pickles, relishes, and olives. They are high in cost but low in nutrients.
17. Limit use of chips, cookies, and other snack foods. They are high in calories and cost, but low in nutrients.
