

Adult Study

Study objective:

This study is designed to evaluate the presence of comorbidities (ADHD, OCD, anxiety, etc.) and the quality of life in adults with complex motor stereotypies.

Participant eligibility:

Participants must be 21 years old or older and continue to exhibit primary complex motor stereotypies.

Requirements:

1. **Introductory phone screening** –The participant is screened by the Study Coordinator to determine whether he/she meets the study criteria.
2. **Online forms** –Various questionnaires are provided to be completed online - may take up to 90 minutes to complete
