Charles E. Silberstein Research Fellowship
in the Johns Hopkins Department of Orthopaedic Surgery

Charles E. Silberstein, M.D., M.Sc.
Department of Orthopaedic Surgery
Phelps Center for Cerebral Palsy and Neurodevelopmental Medicine
Professor Emeritus
Johns Hopkins Medicine

Paul D. Sponseller, MD, MBA
Department of Orthopaedic Surgery
Chief - Division of Pediatric Orthopaedics
Professor of Pediatric Orthopaedic Surgery
Johns Hopkins Medicine

Michael C. Ain, MD
John E. Tis, MD
Ranjit A. Varghese, MD
R. Jay Lee, MD
Charles E. Silberstein Research Fellowship

Award Details:
We are pleased to announce the Charles E. Silberstein Research Fellowship in the Johns Hopkins Department of Orthopaedic Surgery for the summer of 2017. The Silberstein Research Fellowship will support a student who will engage in one or more clinical orthopaedic research projects for 2-3 months during the summer. Eligible students should be in the first three years of medical school. They will work with Johns Hopkins Pediatric Orthopaedic faculty and the Poggi Research Fellow to bring a project to substantial completion and eventual publication. They will also be involved in the Educational Program of the Division of Pediatric Orthopaedics. The start date is Summer 2017 and is flexible to meet the student's calendar.

Department of Pediatric Orthopaedics at The Johns Hopkins Hospital:
The Johns Hopkins Children’s Center offers one of the most comprehensive pediatric medical programs in the country, with more than 92,000 patient visits and nearly 9,000 admissions each year. Johns Hopkins Children’s Center is consistently ranked among the top children's hospitals in the nation by U.S. News & World Report. The Division of Pediatric Orthopaedics at The Johns Hopkins Children's Center offers a wide variety of state-of-the-art services for children and adolescents in a compassionate and caring environment. Division faculty and staff are leaders in their fields, whether as educators, clinicians, surgeons, or researchers. The division's faculty provide expertise in diagnosing and treating a wide variety of bone-related growth problems, including dwarfism, scoliosis, Marfan Syndrome, and skeletal dysplasias. In addition to its surgical and clinical offerings, the Division is investigating the genetic basis of scoliosis and the clinical features of Marfan Syndrome.

Eligibility:
Applicants should be completing their first or second year of medical school. The student must be in good academic standing and have an interest in pursuing a career in orthopaedic surgery. The successful applicant will be responsible, motivated, intellectually curious, and work independently.

Award Stipend and Benefits:
The recipient of this award will receive a $4,000 stipend to cover expenses for the summer as well as travel expenses for national presentations.

How to Apply:
Eligible students can apply by filling out the attached application and submitting it, along with supporting documents, to the Department of Pediatric Orthopaedic Surgery at the Johns Hopkins Children’s Center. Detailed directions can be found on the application. The deadline for the application is March 15, 2017. However, we recommend submitting an application as soon as possible.

If you have any questions regarding the application, please contact the current Poggi Research Fellow, Brian Sullivan, at bsulli17@jhmi.edu
The goal of the Charles E. Silberstein Research Fellowship is to launch the careers of future leaders in the field of orthopaedics. This funded summer internship experience is designed for first or second year medical students destined for a career in orthopaedic surgery. The Silberstein Research Fellow will work closely with the Pediatric Orthopaedic Department Faculty and the Poggi Research Fellow and will be involved in both research and clinical experiences.

The fellowship is named for Dr. Charles E. Silberstein, M.D., M.Sc., who served as a member of the Johns Hopkins Department of Orthopaedic Surgery for 45 years until his retirement in 2011, when he became Professor Emeritus. Dr. Charles “Chick” Silberstein’s 57-year career as a physician has enriched the lives of thousands of patients, students, and colleagues and has made a significant impact in orthopaedic care throughout Maryland. His lifelong interest in the care of children with disabilities led to his 42-year affiliation with the Kennedy Krieger Institute, where he remains on staff. His establishment of the Special Program for Children with Disabilities (now the KKI Physically Challenged Sports Program) has raised self-esteem for hundreds of children through healthy competition.

Dr. Silberstein obtained his Doctor of Medicine degree from the University of Maryland in 1958. He then completed his internship and residency in orthopaedic surgery at Thomas Jefferson University Hospital in Philadelphia in 1963 before serving as a N.I.H. post-doctoral Fellow at Jefferson where he received his Master of Science degree in 1964. After returning to Baltimore to begin his orthopaedic practice he came under the tutelage and mentorship of Dr. Winthrop M. Phelps, founder and Director of the Children’s Rehabilitation Institute in Reisterstown, which then was relocated to Baltimore City to become the Kennedy Institute. He has been associated with KKI since its opening in 1967, serving as director of the Orthopaedic Surgery Section from 1992-2001.

Renowned for his generous care for the underserved, Dr. Silberstein has donated countless hours of care throughout Maryland during his career, for many decades travelling to Allegheny, Garrett, Washington, and P.G. and Anne Arundel counties to hold clinics for those without the means to travel to Baltimore. He has followed many children from infancy to adulthood and provided care for those adults with special needs, a specialty which few are qualified to practice.

Dr. Silberstein has been closely linked to sports medicine in Baltimore, serving for many years as a team physician and advisor for the Orioles and for Hopkins University Athletics. His steady presence and good judgment have made him a cornerstone of orthopaedics in Baltimore.
Dr. Sponseller has been Director of the Division of Pediatric Orthopaedics at the Johns Hopkins Children’s Center for over 28 years. He earned his medical degree from the University of Michigan and completed his residency at the University of Wisconsin. He subsequently completed a fellowship in pediatric orthopaedic surgery at Boston Children’s Hospital of Harvard Medical School. Recently, he earned both a Master of Science degree in Business of Medicine and a Master of Business Administration at the Johns Hopkins University.

Dr. Sponseller's special interests include spine deformity, pediatric trauma, Marfan syndrome, bladder extrophy, and hip disorders. He has been awarded the Arthur H. Heune Award for career research by the Pediatric Orthopaedic Society of North America (POSNA). In addition, he has received the Yamaguchi Award for best paper in pediatrics by the American Urological Association (AUA). He has been on the Board of Directors of the Scoliosis Research Society (SRS) and POSNA. He is the Deputy Editor for Pediatrics of the Journal and Bone and Joint Surgeons (JBJS) and has published over 200 research articles.

Honored on several occasions for his excellence in teaching and research, Dr. Sponseller was named Outstanding Teacher by the Union Memorial Orthopaedic Program and was twice awarded Teacher of the Year in Orthopaedic Surgery by The Johns Hopkins Hospital. Dr. Sponseller has traveled to Guyana, South America, on three separate occasions to volunteer as a Pediatric Orthopaedic Surgeon for Project Dawn while simultaneously teaching medical students, residents, and fellows.
Dr. Ain has been an attending surgeon at Hopkins for 15 years. His interests include skeletal dysplasia, spine deformity, and pediatric trauma. Dr. Ain earned his medical degree from Albany Medical College of Union University where he also completed his residency. He completed his fellowship in pediatric orthopaedic surgery at the Johns Hopkins University.

Dr. Tis has been on the Hopkins faculty for four years following five years of active military duty including tours of Iraq and Afghanistan. His interests include pediatric sports medicine and hip arthroscopy. Dr. Tis earned his medical degree from Georgetown University and completed his residency at Walter Reed Army Medical Center. After his military service, he completed a fellowship in pediatric orthopaedics at Pediatric Orthopaedic and Scoliosis Specialists of San Diego.
Dr. Varghese has been at Hopkins for over two years. His interests include cerebral palsy, club foot, and hip dysplasia. He earned his medical degree at Kasturba Medical College in Mangalore, India, and completed his residency in orthopaedic surgery at Kasturba Medical College in Mangalore, India. He has completed fellowships in pediatric orthopaedic surgery at Kasturba Medical College in India, Gillette Children’s Hospital, British Columbia Children’s Hospital in Vancouver, and a fellowship in orthopaedic oncology at Massachusetts General Hospital.

Dr. Lee is the newest division member. His interests include sports medicine and resident education. He earned his medical degree at the Ohio State University and completed his residency in orthopaedic surgery at Hopkins. He pursued a fellowship in pediatric orthopaedics at the Children’s Hospital of Philadelphia.
2016 Silberstein Fellow:
Ethan Cottrill

Ethan Cottrill, MS II at The Johns Hopkins University School of Medicine (MD-PhD Program).

Summer Projects:
• Magnetic Resonance Imaging to Assess the Spatial Order of Physeal Maturation in the Knee (manuscript submitted to CORR).
• Arthroscopic Medial Imbrication for Patellar Instability (manuscript submitted to CORR).
• Sacral-Alar-Iliac Fixation in Early Onset Scoliosis (abstract submitted to 2016 ICEOS).
• Optimizing Patients with Cerebral Palsy for Scoliosis Surgery: Systematic Review (manuscript in preparation).
• Pain as a factor in determining timing of corrective hip surgery in patients diagnosed with cerebral palsy (manuscript in preparation).
• Pelvic Development following Dissection of the Pubic Symphysis at Birth in a Rabbit Model (research ongoing).

“From assisting in clinic to attending lectures and other educational events, from “scrubbing in” to conducting research, my experiences as the 2016 Silberstein Fellow have solidified my desire to pursue a career in orthopaedic surgery.”
The Johns Hopkins Children’s Center state-of-the-art Charlotte R. Bloomberg Children's Center building opened May 1, 2012. Families and visitors now enter a world designed for 21st century pediatric medicine. From its soaring lobby, large operating rooms equipped for the most technically complex procedures imaginable, spacious patient rooms and welcoming family facilities, the new building provides a hospital experience that matches the world-class medicine it affords.

The Charlotte R. Bloomberg Children’s Center for Pediatric Care features 205 private inpatient rooms including 120 acute care rooms, 85 intensive care rooms, Level 1 pediatric trauma service, pediatric burn services, 10 pediatric operating rooms, multiple playrooms, and a two-story indoor play area for patients.
The Johns Hopkins Department of Orthopaedic Surgery has been caring for patients, fostering innovation, and nurturing orthopaedic leaders for over 110 years. At the invitation of Dr. William Halsted, Chief of Surgery at Johns Hopkins, Dr. William S. Baer organized the first Orthopaedic Outpatient Clinic in 1900. He graduated his first resident, Lewis C. Spencer, from the Department of Orthopaedic Surgery in 1915. Until his death in 1931, he graduated one resident annually, many of whom became leaders in American orthopaedics. One of Dr. Baer’s partners in private practice, George E. Bennett, was appointed Orthopaedic Surgeon-in-Chief in 1931. By 1937, one-sixth of the 150 surgeons certified as orthopaedists by the American Board of Orthopaedic Surgery had completed their residencies at Johns Hopkins.

A third partner of Drs. Baer and Bennett, Dr. R. W. Johnson, Jr., became the next program chairman. Among his many significant contributions was the organization of the Journal of Bone and Joint Surgery. Dr. Robert A. Robinson was appointed the first full-time professor of Orthopaedic Surgery at Hopkins in 1953. Under Dr. Robinson’s tutelage, the residency program expanded to include additional residents, a research component, and rotations through affiliated hospitals. In 1973, with reorganization of the Department of Surgery into a section of surgical sciences, orthopaedics achieved greater organizational and financial independence with elevation to departmental status. Dr. Lee H. Riley, Jr., was appointed director of the Department in 1979 when Dr. Robinson became professor emeritus. Under Dr. Riley, the program expanded to graduate five residents annually, a new Orthopaedic Center was opened in 1982, a rotation to the Maryland Institute for Emergency Medical Services was initiated to increase the residents’ experience with polytrauma, a spine service was added to the Department, and the residency program was approved for an additional year of training.

In April 1991, Dr. Richard Stauffer joined the Department of Orthopaedic Surgery as the Orthopaedic Surgeon-in-Chief. Dr. Stauffer’s status as an internationally renowned orthopaedic surgeon enhanced the Department and its involvement with the rest of the Johns Hopkins Medical Institutions. Dr. Stauffer expanded the already outstanding faculty and staff with the addition of world-renowned physicians and researchers. In 1998, Dr. John P. Kostuik, Professor of Spinal Surgery, lead the department followed by Dr. Frank J. Frassica, Professor of Orthopaedic Oncology, in 2000. Dr. Frassica served as director until 2011, when Dr. James R. Ficke took over as Department Director after completing work as an orthopaedic surgeon for the United States Army.
The City of Baltimore:

Centrally located on the East coast, Baltimore combines the advantages of a convenient urban center with access to cultural and athletic activities. A thriving community of young professionals provides an excellent social environment.

Baltimore and Medicine:

Baltimore and the Johns Hopkins School of Medicine have a history of a long productive partnership, fostering medical innovation and leadership over the past two centuries. Hopkins, well known for a long list of “firsts” including the first residency program, the development of CPR, and the first bone marrow transplant, boasts a diverse and highly touted medical staff.
Baltimore Sports:

Baltimore is home to the two-time Super Bowl champion Ravens of the National Football League (NFL) and the three-time World Series champion Orioles of Major League Baseball (MLB). Both teams’ stadiums are located in the downtown area and feature the newest advances in stadium technology and design. The stadiums are easily accessible from the Johns Hopkins campus via public transportation.

Baltimore’s Waterfront:

Baltimore’s Inner Harbor is the city’s premier tourist attraction. Here you can find the National Aquarium, Harborplace, Maryland Science Center and a host of restaurants and shops. There is surely something for everyone to enjoy at the Inner Harbor. Other nearby attractions include Fort McHenry (birthplace of the “Star-Spangled Banner”), Lexington Market and Walters Art Museum.
Application

- Complete the attached application
- Submit a letter of recommendation
- Submit an essay explaining why you are interested in doing clinical research for the summer in the Department of Orthopaedic Surgery at Johns Hopkins Medicine
- Include your curriculum vitae
