

Wheelchair and Seating Assessments

The Wheelchair and Seating Clinic is for individuals who either have or need a wheelchair and who would benefit from the expertise and recommendations of a physical or occupational therapist to meet their mobility needs.

The therapists in our Wheelchair Clinic work closely with an equipment company representative to ensure that patients receive the most appropriate mobility equipment. Attention is given not only to the type of wheelchair or mobility device, but also to the seating system and accessory equipment needed to promote the safest and highest level of functional independence. Training to use the mobility device most efficiently is available.

A therapist assesses a patient's current power chair.
