Mission

Provide a broadly collaborative and multi-disciplinary academic home for research, education, quality improvement and innovation designed to improve primary care and health outcomes for the benefit of patients and society. Pull together the many centers of excellence within Hopkins that are committed to the advancement of primary care to effectively coordinate efforts, promote collaboration, invest in innovation, and channel creativity toward improving the health of our patients.

Vision

Be recognized regionally, nationally and internationally as an innovative source of leadership, discovery, and dissemination of evidence-based clinical processes, education, scholarship, and public policy development regarding primary care.

Aims

- 🚩 [Care Delivery](#) - Develop, implement, and evaluate models of primary care delivery.
- 🚩 [Education](#) - Enhance the education of all trainees about primary care and to develop the next generation of faculty leaders in primary care.
- 🚩 [Research](#) - Conduct research and create new discoveries related to primary care medicine.
- 🚩 [Policy](#) - Develop frameworks and models for translating research and innovation in primary care into health care policy and practice.
