Brain Injury Comprehensive Rehabilitation and Treatment Services

The Johns Hopkins Bayview Brain Injury Comprehensive Rehabilitation and Treatment Services program provides multidisciplinary services to adult survivors of acquired brain injury who have behavioral, cognitive or emotional difficulties. This program teams with the Johns Hopkins Bayview Psychiatric Rehabilitation Program and Adult Outpatient services to offer a holistic approach to rehabilitation and treatment services.

Mission and Values

The mission of the program is to assist people who have acquired brain injury as they learn to accept all aspects of their illness, advance their wellness and attain their maximum potential so that they can have a better quality of life.

The work of the program is based on these values:

• Provide therapeutic education and hope to people with brain injuries
• Promote multidisciplinary teamwork to better provide holistic care
• Pursue learning and research

What Is Acquired Brain Injury?

Acquired brain injury (ABI) is an injury to the brain that occurs after birth. Well-known causes of ABI include:

• Traumatic brain injury (TBI)
• Tumors
• Blood clots
• Strokes
• Seizures
• Toxic exposures
• Infections
• Metabolic disorders, such as insulin shock
• Lack of oxygen to the brain

Symptoms of Acquired Brain Injury

Common long-term symptoms of ABI can be divided into emotional, behavioral, cognitive and physical categories. Examples include:

Emotional: depression, anxiety, loss of interest, poor motivation

Behavioral: inappropriate expression of anger, irritability, impulsivity, disinhibition, drug or alcohol abuse

Cognitive: forgetfulness, inattention, difficulty multitasking

Physical: headache, dizziness
