We are conducting a research study funded by the American Academy of Child and Adolescent Psychiatry. This study investigates how iron status in the body affects children. It is conducted at the Kennedy Krieger Institute & Johns Hopkins Hospital.

Who may be eligible:
- Normally Developing Children, ages 6-10/grades 1-5.

What is involved:
- 1 blood test
- 1 day of testing and interviews 4-5 hours.
- 3 nights of wearing a movement monitor on the ankle
- $100.00 Compensation

There are no direct medical benefits to or significant risks from participating in this study.
