

Approved April 30, 2012

# **DO YOU SMOKE?**

**A NIH-funded research project is being done to learn more about how nicotine and the medication Varenicline affect the brain and behavior.**

**Varenicline is FDA-approved for smoking cessation treatment and marketed as Chantix, a drug used to help people quit smoking.**

**We also want to learn more about the genetic and environmental risk factors for nicotine addiction.**

**The study requires 3 visits, 1 of which includes staying on the research unit at Johns Hopkins Hospital for 6 nights.**

**Compensation up to \$695 will be provided for study completion.**
