Clinical Research Study

- Are you a healthy, non-smoking Caucasian (white) man between the ages of 18 and 35?
- You may be eligible for a research study being conducted by the Lieber Institute for Brain Development.
- This study will investigate a drug that alters smooth muscle contraction and its effect on brain function using imaging scans (e.g. MRIs).
- The study involves a 1-2 hour screening visit to determine if you are physically and mentally healthy.
- If you are healthy, you will complete 2 study visits lasting approximately 8 hours each. During this study you will receive a single dose of nimodipine as well as a placebo.
- You will be compensated $500 for completing the study.
